With our LEED and Hydro-Quebec certifications, we provide you with certified models and data to your green building project

Integrated and unique solutions for the design, construction and management of environmentally friendly buildings.

## Services

### From early design phases ...

- Assistance in the financial and legal planning
- Registration of project with accrediting institutions
- Facilitation of early design phases along with architects
- Computer modelling and optimisation
- Verification and certification

### ...to the construction...

- On site coaching and co-management
- Commissioning and air quality inspection

### ... to the delivery...

- Filing onto selected institutions
- Follow-up until necessary funds and accreditations are obtained

### Did you know...?

You could obtain up to \$2 Million in subsidies for your project? Efficiently managed LEED projects could lead to an increase in costs of **only 2%**!

« ABOVE Technologies facilitated the development of our green platform while providing us with cost minimizing solutions »

- Ecotouristic hotel, Village Nunaga

## Profile

### Our mission:

To facilitate the planning and design of green buildings while focusing on the optimisation of your resources.

### Our philosophy

We offer fully integrated green building design services. To maximize your return, we cover all aspects from financing program identification, corporate strategy and marketing till technology management.

### Our history

Born in 2004 to eliminate the inefficiencies in the green building industry and to optimize processes, ABOVE Technologies has already provided value-adding solutions to more than **35 green projects** in Quebec and surroundings areas.

It is our commitment to promote the development of green buildings while supporting an efficient planning of your project.
